

UC Soft Delete

Safe deleting for Worksite documents

For Filesite & Desksite

Allowing users to safely delete documents without the risk of losing any data

Allowing users to delete documents comes with risks. Accidental or even malicious deletions can mean lost documents, often difficult and time consuming to restore from backups.

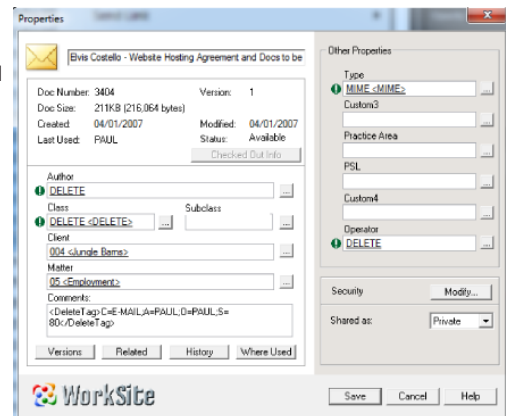

This utility integrates into the standard Filesite and Desksite menus and will allow users to effectively delete documents, whilst allowing IT administrators to quickly find and recover them.

Safe Deleting for Worksite Documents

With the UC Logic UC Soft Delete utility it is now possible to allow users to 'delete' documents without running the risk of losing any data.

UC Soft Delete allows users to effectively hide their unwanted documents. Instead of using the standard Delete command, which actually deletes the document, the Soft Delete command will change the security of the document, so it cannot be found by any user except designated administrators.

Key Features

- Allows users to 'delete' documents risk free
- Hides documents from worklists, folders and searches
- System administrators can easily locate and 'restore' these documents
- Integrated into Filesite and Desksite clients

Requirements

- Autonomy iManage Filesite/Desksite 8.5/9.0/9.2
